PROFESSIONAL SUMMARY

Certified Full Stack Software Engineer with hands-on experience and passion for building full-stack web, mobile, and cloud-based backend services using **Python (Flask), REST APIs, Java, SQL, Docker, AWS, and CI/CD practices**. I love creating sticky applications for customers beyond just the basic requirements. I am passionate about the end user experience and focus my coding practices to simplify and create friction free customer flows. Working in a fast-paced role with a leading Australian retailer taught me to manage stakeholders, stay calm under pressure, and keep the customer experience front and center even during peak periods, and I carry that same mindset into how I build reliable, user-focused software. I am also laser focused on writing clean testable code, API design for scale, and continuous deployment by partnering across agile engineering teams.

- Designed and developed a **Kotlin/Jetpack Compose event booking mobile app with reusable UI components** for an events venue, supporting event discovery, gallery browsing, contact details, and booking workflows, targeting 250+ early users with a goal of capturing 60% of the venue's total user base.
- Developed and deployed a production ready customer-facing platform for the SustainaPet application, including a Flutter mobile app and Flask backend-for-frontend (BFF), to **help young Australians reduce carbon footprint and improve sustainability practices**.
- Created a scalable cloud integration solution using AWS, Docker, GitHub Actions, and PostgreSQL/DynamoDB that leveraged ML models to **help birdwatchers and wildlife photographers accurately classify images or videos of birds**.

I am curious and have a natural ability to learn unfamiliar technologies. I can connect the dots on how different systems work and design scalable solutions. I have recently been upskilling on **Claude Code and Cowork**, and I'm excited to build plugins and connectors to real world applications.

SKILLS AND EXPERTISE

- Languages:** Java, Python, JavaScript, TypeScript, Dart, Kotlin, SQL
- Backend & APIs:** Flask, REST APIs, API Design, BFF Architecture, Server-Side Validation, Error Handling, Logging, Debugging
- Cloud & Databases:** AWS Lambda, S3, DynamoDB, API Gateway, CloudWatch, PostgreSQL, SQL, NoSQL Data Modelling, Schema Design
- DevOps & Testing:** Docker, GitHub Actions, CI/CD, Git, GitHub, Environment Variables, Secrets Management, JUnit, Mockito, Unit Testing
- Code Quality & Delivery:** Code Reviews, Linting, Formatting, Static Analysis, Clean/Testable Code, Production Support, Bug Fixes
- Frontend & Mobile:** Flutter, Jetpack Compose, React, TypeScript, Component-Based UI, Responsive Interfaces
- Team Playing Skills:** Agile/Scrum, Sprint Planning, Pair Programming, Technical Documentation, Cross-Functional Collaboration

INDUSTRY EXPERIENCE

POSTGRADUATE INDUSTRY EXPERIENCE PROJECT

July 2025 – November 2025

“SUSTAINAPET” – help young Australians reduce their carbon footprint and improve sustainability practices.

Melbourne, VIC

- Developed and deployed cloud-based frontend and backend platform components for SustainaPet, including receipt-based carbon estimation.
- Developed and deployed a production ready application, SustainaPet, including a Flutter mobile app and Flask backend-for-frontend (BFF).
- Designed, integrated, and tested REST API pipelines for the grocery scanner application to convert images into text using Optical Character Recognition (OCR), creating leaderboards, maintaining graph models with backend validation, and database-backed workflows across multiple releases.
- Performed end to end validation, built ranking logic, and dynamic UI workflows.
- Wrote clean, maintainable, testable application logic following linting, formatting, static analysis, and code review standards, contributing 20+ structured pull requests.
- Collaborated with cross functional teams within the Agile sprint framework across the entire lifecycle from planning, design, implementation, testing, and deployment support.

Software Engineer

November 2021 – November 2022

Suyati Technologies - Global software engineering firm delivering enterprise cloud applications and digital transformation solutions.

Kochi, India

- Reduced effort and time by 30%** to reach probable buyers by **building and deploying an AI application** that integrated a **sales call prioritisation model** ranking potential insurance buyers by likelihood to convert using attributes such as age, marital status, income, and education level.
- Helped design and build a brand **new comment sanitiser model to create a safer experience for youngsters**, detecting and filtering negative/toxic comments on a **proprietary social media site**, and deployed a blog site supporting account creation, image posting (stored as base64 strings), and user commenting.

- **Improved code quality, maintainability, and delivery reliability** by leveraging **advanced Git functions** for version control and team collaboration, managing branches, commits, and merges.
- **Created and maintained clear code documentation and repositories** and adhered to SDLC principles to improve project velocity and scalable team processes.

NOTABLE INDUSTRY AND ACADEMIC PROJECTS

Kalakshetra Events Hub (Small Business)

May 2026 – Present

Mobile Event Booking & Venue Management Application

Kochi, India

- Designed and developed a **Kotlin/Jetpack Compose event booking mobile app with reusable UI components** for an events venue, supporting event discovery, gallery browsing, contact details, and booking workflows, targeting 250+ early users with a goal of capturing 60% of the venue's total user base.
- **Beyond the basic requirements, built reusable UI components** including navigation, forms, cards, custom theming, structured layouts, and responsive screens following Material Design principles that were **extended to future projects**.
- **Designed and implemented the end to end business logic** for event participation and hall rental workflows, including customer details, payment information, GST fields, and booking summaries.

Bird Classification Cloud Pipeline (University Project)

February 2025 – June 2025

Cloud-Native File Processing Pipeline

Melbourne, VIC

- Built a cloud-based backend pipeline using **AWS Lambda, S3, and DynamoDB/PostgreSQL** to process uploaded bird images and videos, leveraging ML models to help birdwatchers and wildlife photographers accurately classify bird species.
- Containerised backend dependencies, cloud deployment, and operational support practices using **Docker**, and **proactively debugged runtime failures using CloudWatch logs**.

Robotic Railway Assistant (Bachelor's Capstone Project)

June 2022 – May 2023

Patented Raspberry Pi-Based Intelligent Robotic Assistant

Kochi, India

- **Designed and built a patented** interactive robotic railway assistant that provides guidance to passengers on destination and train announcements with multi-language support.
- **Built the robot using Raspberry Pi, a custom 3D-printed body**, and a neural network model to query Google APIs for translation and Railway system APIs to fetch announcement and train information.
- Built a multilingual voice assistant **supporting 10+ languages** using speech recognition, translation APIs, and text-to-speech services to automate communication-based assistance queries.

CERTIFICATIONS

- **AWS Cloud Practitioner Essentials** - Amazon Web Services, Issued Feb 2026
- **Certified Specialist in Full Stack Development** - ICT Academy of Kerala in collaboration with K-DISC
- **Deloitte Australia Technology Job Simulation** - Forage, Issued Jun 2024

EDUCATION

Master of Information Technology (GPA 3.0/4)

February 2024 – December 2025

Monash University

Melbourne, VIC

Bachelor of Technology, Computer Science & Engineering (minor in Robotics & Automation)

August 2019 – June 2023

Kerala Technological University (KTU)

Kochi, India
